July 25, 2023

Usage

Use `\usepackage{bbm}`¹ in your preamble. Then, simply write `\mathbbmss{X}` in math mode to render X.

Example:

```
\documentclass{article}
\usepackage{bbm} % This package does the magic
\begin{document}
\section*{Something}

This is the 'eks' new twitter logo:  $\mathbbmss{X}$ $.
A bigger size:  $\huge \mathbbmss{X}$ $.
\end{document}
```

The above code renders the following:

Something

This is the 'eks' new twitter logo: X. A bigger size: X.

Fin X.

¹See `bbm` package by Torsten Hilbrich (2010).
